Infra-red Learner

The Infra-red commissioning tool is an essential piece of equipment for every integrator.

The application automatically fills fields within Switch Builder for rapid programming.

Use existing code libraries or hex codes obtained off the internet through the import utility.

Product Highlights

• *Program infra-red remote controls onto the Embedded Server*

• *Rapidly deploy virtual remote controls onto the Embedded Interface*

• *Send infra-red codes that can be triggered or made part of a scene, macro or logic statement*

Features and Benefits

Capture Infra-red codes through the Infra-red commissioning tool or use your existing ProntoIR library.

Once you have captured and configured either RS232 or infra-red codes for a particular device, the Switch Builder saves them for future use.

Switch Builder seamlessly ties together with Global Cache IR programming utility (provided with unit)

Connects to programming laptop via RS232 DB9 port (or third party DB9 - USB adapter)

Cut and paste ProntoIR hex codes directly into the Switch Builder

Export allows conversion back to ProntoIR hex codes

Set sample lengths of 20, 35, 50 or 100ms

Set repeat counts from 1-100 times

Learns full spectrum frequencies from 30KHz to 500KHz
